

# R&D Activities at IRID

International Research Institute for  
Nuclear Decommissioning

# Outline of IRID

## 1. Name

International Research Institute for Nuclear Decommissioning (IRID)

## 2. Location of Main Office

5F 3Toyo Kaiji Building, 23-1 Nishi-shinbashi 2-chome, Minato-ku  
Tokyo 105-0003, Japan

website: <http://www.iris.or.jp/en>

## 3. Membership (18)

**Research Institutes:** Japan Atomic Energy Agency (JAEA),  
National Institute of Advanced Industrial Science and Technology

**Manufacturers, etc.:** TOSHIBA Corporation, Hitachi-GE Nuclear Energy, Ltd.,  
Mitsubishi Heavy Industries, Ltd., ATOX Co., Ltd.

**Electric Utilities, etc.:** Hokkaido Electric Power Co., Inc., Tohoku Electric Power Co., Inc.,  
Tokyo Electric Power Co., Inc., Chubu Electric Power Co., Inc.,  
Hokuriku Electric Power Company, Kansai Electric Power Co., Inc.,  
The Chugoku Electric Power Co., Inc., Shikoku Electric Power Co., Inc.,  
Kyushu Electric Power Co., Inc., The Japan Atomic Power Company,  
Electric Power Development Co., Ltd., Japan Nuclear Fuel Limited

# IRID's R&D projects in FY2015

Evaluation of Long Term  
Integrity of spent fuel  
(FY 2015-2016)

## **Decontamination/ Dose Reduction**

Remotely Operated  
Decontamination  
Equipment  
(FY 2015)

## **Repair and Water Leakage Stoppage of PCV**

Water Stoppage  
Technology of PCV  
(FY 2015)

Full-Scale  
Test  
(FY 2015)

## **Investigation/Analysis in the Reactor**

Detection of  
Fuel Debris  
(FY 2015)

### **Investigation**

Investigation  
Inside PCV  
(FY 2015)

Investigation  
Inside RPV  
(FY 2015)

Accident  
Progression  
Analysis  
(FY 2015)

### **Characterization**

Identifying  
Properties of  
Fuel Debris  
(FY 2015-2016)

## **Debris Retrieval**

PCV/RPV  
Integrity Evaluation  
(FY 2015)

Fundamental  
Retrieval Technology  
for Fuel Debris &  
Reactor Internals  
(FY 2015-2016)

Criticality Control  
in Fuel Debris  
Retrieval  
(FY 2015)

Upgrading of Retrieval  
Method for Fuel Debris  
& Reactor Internals  
(FY 2015-2016)

Collecting,  
Transferring  
and Storing of  
Fuel Debris  
(FY 2015-2016)

## **Radioactive Waste Treatment/Disposal**

Solid Waste  
Treatment and Disposal  
(FY 2015-2016)

# IRID's R&D projects in FY2015

Evaluation of Long  
Term Integrity of  
spent fuel  
(FY 2015-2016)

## **Decontamination/ Dose Reduction**

**Remotely Operated  
Decontamination  
Equipment  
(FY 2015)**

## **Repair and Water Leakage Stoppage of PCV**

Water Stoppage  
Technology of PCV  
(FY 2015)

Full-Scale  
Test  
(FY 2015)

## **Debris Retrieval**

PCV/RPV  
Integrity Evaluation  
(FY 2015)

Fundamental  
Retrieval Technology  
for Fuel Debris &  
Reactor Internals  
(FY 2015-2016)

Criticality Control  
in Fuel Debris  
Retrieval  
(FY 2015)

Upgrading of Retrieval  
Method for Fuel Debris  
& Reactor Internals  
(FY 2015-2016)

Collecting,  
Transferring  
and Storing of  
Fuel Debris  
(FY 2015-2016)

## **Investigation/Analysis in the Reactor**

Detection of  
Fuel Debris  
(FY 2015)

Investigation  
Inside RPV  
(FY 2015)

Accident  
Progression  
Analysis  
(FY 2015)

### **Investigation**

Investigation  
Inside PCV  
(FY 2015)

### **Characterization**

Identifying  
Properties of  
Fuel Debris  
(FY 2015-2016)

## **Radioactive Waste Treatment/Disposal**

Solid Waste  
Treatment and Disposal  
(FY 2015-2016)

# Dose Rate Goals after decontamination

- ◆ Dose rate reduction goals to be achieved using the decontamination equipment  
(the necessity of PCV leakage investigation and repair work, and overall dose reduction scenario)

3 mSv/h for work area

5 mSv/h for access route

	Unit 1	Unit 2	Unit 3
Necessity of dose reduction* and the dose rate			
Dose rate in the reactor building	Low as a whole: <b>about 1-10 mSv/h</b> Higher in south area and at some points in southeast area: <b>5,000 mSv/h</b>	Before Oct. 2014: <b>2-60 mSv/h</b> After Oct. 2014: <b>about 5-10 mSv/h</b> (Decontamination in lower/middle parts and shielding were conducted)	High as a whole: <b>about 20-100mSv/h</b>

\* Mapping results of the dose rates at planned operation areas(with needs of dose reduction) derived from PCV investigation and repair project

3 mSv/h to 10mSv/h  
 10 mSv/h to 20mSv/h

20 mSv/h to 50mSv/h  
 More than 50mSv/h

Out of study due to the lack of data

# Results and Future Plan of Decontamination Equipment Development

## Upper floors

- FY2013: design
- FY2014-2015: production, verification test, applicability study of actual device

## Underground floor

- FY2014: Study of technical challenges, development planning

## High places

- FY2013: design, production
- FY2014-2015: improvement, verification test, applicability study of actual device

Dry ice blast

High pressure water jet

Suction/Blow

## Low places <Development completed>

- FY2011-2012: design, production, test in 2F
- FY2013: improvement, verification test (factory, 1F)

Suction/Blow

High pressure water jet

Dry ice blast

# IRID's R&D projects in FY2015

# Assessing Conditions inside Reactor by Muon Observation Technology

## Transmission Method

Can detect existence/non-existence of an object on Muon flying direction (two-dimensions)

Can image fuel debris at a spatial resolution of about 1 m

**Detector: One small-size detector (easy installation and quick application)**

## Scattering Method

**Can detect existence/non-existence of an object at Muon scattering area (three-dimensions)**

**Can Image fuel debris at a spatial resolution of about 30 cm**

Detector: One pair of large-size detectors (needs wider space and longer time to install)

**Can distinguish heavy element such as Uranium**

# Measurement by Transmission Method

- Detectors were installed at the north and north-west corners of Unit 1 reactor building (late January, 2015)
- Measured from February through May
- Detectors were shielded by 10 cm thick iron plates

# Estimation of Fuel Debris Location Based on Comparison between Design Image and Measurement

- ◆ Measured data, though it does not clearly indicate, shows that equipment, etc. are detected at locations where they are supposed to exist based on the design documents
- ◆ The boundaries of the PCV and the RPV in the image acquired from measurement matches those in the image drawn from design data.
- ◆ High density material (fuel debris) is not detected at the area where fuel assemblies are originally installed.

# Measurement by Scattering Method

- ◆ Detectors will be installed in front of the R/B and 2<sup>nd</sup> Floor in T/B (Operation Floor) at Unit 2
- ◆ Background radiation should be eliminated by shielding and algorism
- ◆ The detector in front of the R/B should be shielded by 8 cm thick iron plates
- ◆ The detector on the second floor of the T/B will not be shielded because of low background radiation

Solid Waste  
Treatment and Disposal  
(FY 2015-2016)

# Investigation inside the PCV (Unit 1)

[Investigated area] 1st floor grating outside the pedestal

[Steps for investigation and device development]

(1) Investigation from X-100 penetration (FY 2015)

1. Acquire information about the grating area on the 1st floor (access point to the basement, etc.): B1 (finished)
2. Acquire images showing the outside of the pedestal on the basement floor (esp. access entrance and nearby vent tube) following the results of investigation at the torus room using a small boat in November 2013: B2 (planning)

(2) Investigation from X-6 penetration (FY 2016-2017) (after decontamination around the X-6 penetration)

1. Acquire further information about outside the pedestal on the basement floor by using fuel debris shape measurement apparatus: B3

**B1. Investigation outside the pedestal on 1<sup>st</sup> floor grating (completed in April 2015) : from X-100B penetration**

**B2. Investigation outside the pedestal on the basement floor (planned to be done in FY 2015) : from X-100B penetration**

Necessity of further investigation will be decided according to the results of B2

**B3. Investigation outside the pedestal on the basement and access entrance (FY 2016-2017) : from X-6 penetration**

**Investigation inside the pedestal is planned to be conducted after investigation of Unit No.2 finishes.**

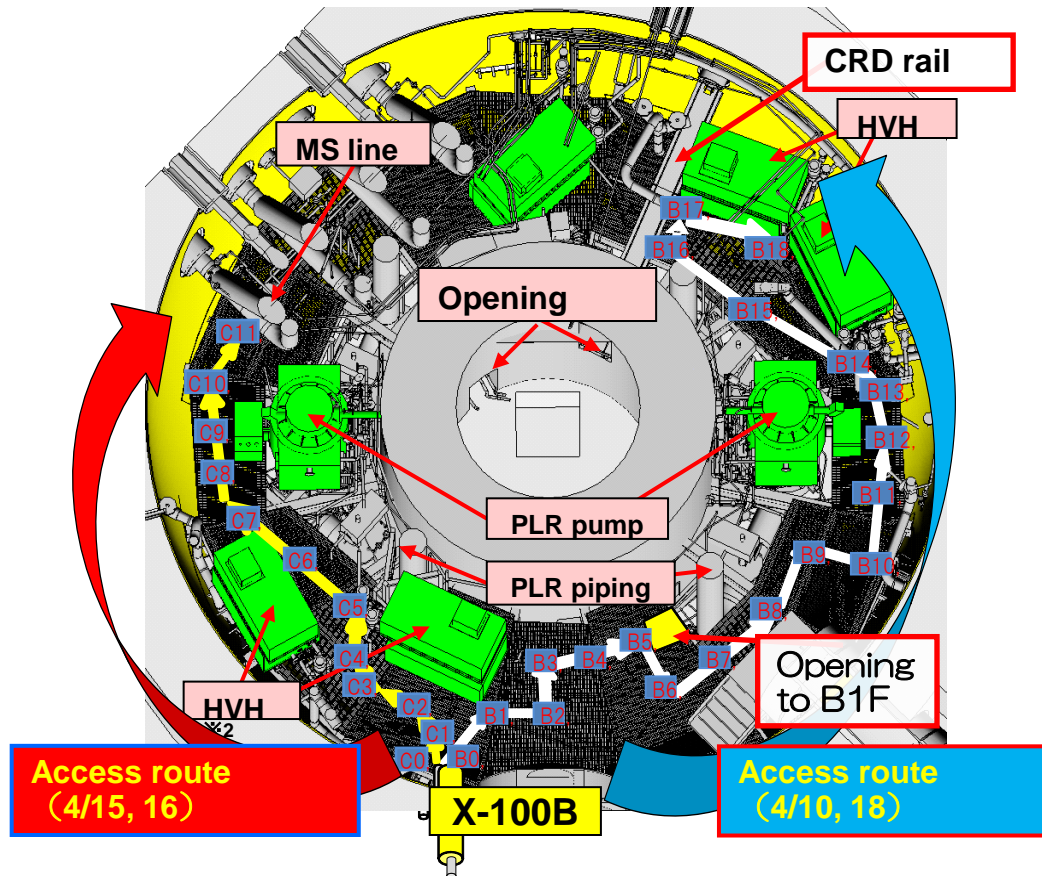

# B1 Investigation Completed in April, 2015

## (1) Overview of equipment

- Shape-changing crawler equipment
- Inserted from the narrow access entrance (X-100B penetration:  $\phi 100$  mm)
- Travel on the grating stably.

## (2) Image of investigation routes

### Traveling through penetration on PCV

transformation

### Traveling on grating

Features of equipment

# Results of B1 Investigation

Investigated area	Results
Access point to the basement	<ul style="list-style-type: none"> <li>For the next investigation (outside the pedestal on the basement), it is confirmed that <b>there is an access point to the basement</b> and <b>no obstacles around it</b></li> </ul>
CRD rail	<ul style="list-style-type: none"> <li><b>Could not reach to the CRD rail</b></li> <li><b>Could not recognize the CRD rail by evaluation of image-processed pictures</b>, which were taken from the farthest reaching point by the investigation camera</li> </ul>
En route of investigation	<ul style="list-style-type: none"> <li><b>No major damage was found</b> inside the PCV equipment (HVH, PLR Line, pedestal wall, etc.)</li> <li>At every investigating point, <b>temperature and dose rate were recorded</b>.</li> </ul>

<Access point to the basement>

<PLR pump>

Conduit

<CRD Rail>

(Image at mock-up facility)

## Investigation inside the PCV (Unit 2)

[Investigated area] - On the platform inside the pedestal (Upper surface of platform and CRD housing)  
- Basement floor

- (1) Investigation from X-6 penetration ( $\Phi 115$  mm) (FY2015): A2
- (2) Investigation from X-6 (Enlarge hole) (FY2016- 2017): A3 and A4
  - Insert debris visualization system, investigate inside the pedestal.

**A1. Investigation on CRD rail** (Conducted in Aug.2013)

**A2. Investigation on platform inside pedestal**

**A3. Investigation of CRD Hsg and on platform (detail)**

**A4. Investigation on basement inside pedestal**

### Step to use X-6 penetration

- Remove shield in front of penetration
- Pierce a hole to penetration hatch
- Remove inclusions inside penetration

Based on the results of internal investigation from A2 to A4, investigation outside pedestal may be conducted.

## **Radioactive Waste Treatment/Disposal**

Solid Waste  
Treatment and Disposal  
(FY 2015-2016)

# Study of fuel debris retrieval method

We will study multiple method for fuel debris retrieval to meet different condition of damaged PCV and scattering fuel debris at each unit

## Submersion method

Most favorable approach for minimizing the radioactive exposure of workers

## Dry method (partial submersion, in-air work)

Development of technology which prevents scattering radioactive materials from PCV is needed to remove PCV contents in-air work

### Top access

Sealing a PCV head (1:4 scale) with Radioactive material diffusion preventing film

### Side access

When fuel debris spreads over pedestal outskirts, the side entry method is to be selected

## **Radioactive Waste Treatment/Disposal**

**Solid Waste  
Treatment and Disposal  
(FY 2015-2016)**

# Characteristics of Nuclear Waste Generated from Fukushima Daiichi NPS Accident

Type of Waste	Characteristics
Rubble/Felled and removed trees/soil, etc.	<ul style="list-style-type: none"> <li>▪ Large quantity and widely distributed</li> <li>▪ Poor experience with the treatment and disposal of felled and removed trees and soil</li> <li>▪ Surface contamination by scattering/diffusion is main contamination and some contamination is penetrating contamination caused by accumulated water</li> </ul>
Secondary waste by water treatment	<ul style="list-style-type: none"> <li>▪ Poor experiences of treatment and disposal</li> <li>▪ Difficult to collect the waste</li> <li>▪ Partial estimation of quantity and kind of nuclide may be possible based on the characteristics of water treatment equipment</li> </ul>
Fuel debris/Demolishing waste	<ul style="list-style-type: none"> <li>▪ Large amount and high dose rate</li> <li>▪ Difficult to sample actual waste due to low accessibility at present</li> </ul>

# Comparison between Wastes from Accident and Operation

Item of uncertainty	Waste from operation	Waste from accident
Generation of waste [quantity, type, period]	◎	△
Handling (collecting/classifying) [difficulty]	◎	△
Characterization [sufficiency of information, difficulty of sampling, representativeness of sample]	○	△
Technologies for processing and packaging waste	○	? ~ △
Burial and disposal methods and safety assessment	△ ~ ○	?
Regulations, technical standards, guidelines, siting	△ ~ ○	?

◎ : Fully understood or good prospect, ○ : Fair prospect, △ : Limited ,  
 ? : Cannot be discussed

- Waste generated from operation has its own problem but is **fairly under control**.
  - Information on basic properties of waste, including quantity at present, future change, activity and chemical substances contained in individual waste is identified.
  - Both unprocessed and processed wastes are appropriately stored and managed in accordance with the current regulations.
  - Regulations and standards, as well as disposal method and safety assessment method, have been in place.
- Many uncertainties poses important technical problems to disposal of the accident-generated waste at the Fukushima Daiichi. **Solving these uncertainties and bringing the waste under control are the major goals** of countermeasures and technology development.

## ~Toward Fuel Debris Retrieval~

- Fuel debris retrieval at the Fukushima Daiichi Nuclear Power Station is expected to be more difficult compared to that of the accident at the Three Mile Island 2 (TMI-2). It is necessary to put domestic and international wisdom together to develop the whole strategy, method and equipment for fuel debris retrieval.
- In order to complete the fuel debris retrieval, it is necessary to clarify the purpose and goal of relating each project, and then, to develop technologies flexibly by planning with an aim to achieve not partial but overall optimization.
- In making strategy, it is important to consider end-state (what you wish to achieve at the end), study various feasible options and always prepare alternative options.

**Thank you for you attention**
